

# Cree® J Series™ 5630 LEDs

#### **PRODUCT DESCRIPTION**

J Series™ LEDs extend Cree's industry-leading portfolio of lighting-class LEDs to a broader set of applications. The J Series 5630 LEDs combine high efficacy and excellent value in a reliable PCT package. The J Series 5630 LEDs are optimized for applications where high efficacy and smooth appearance are critical, such as troffers, panel and outdoor area lights.

#### **FEATURES**

- Industry-compatible size: 5.6 x 3.0 x 0.6 mm
- 3-V configuration
- Flux binned at 25 °C, chromaticity binned at 85 °C
- 6500 K-2700 K ANSI CCTs available
- 70, 80 & 90 CRI available for all CCTs
- · RoHS and REACh compliant

#### **PRODUCT SUMMARY**

| Product Power |       |                |         | Typical            | 4000 K       | , 70 CRI         | 3000 K       | , 80 CRI         | Maximum |
|---------------|-------|----------------|---------|--------------------|--------------|------------------|--------------|------------------|---------|
| Product       | Class | ss Temperature | Current | Forward<br>Voltage | Typical Flux | Typical Efficacy | Typical Flux | Typical Efficacy | Current |
| JB5630        | 0.2 W | 25 °C          | 65 mA   | 2.8 V              | 36.6 lm      | 201 LPW          | 32.3 lm      | 178 LPW          | 240 mA  |

J Series™ Products are sold exclusively by Cree Venture LED Company Limited ("Cree Venture"), regardless of geography. Any orders for J Series Products that are submitted to Cree, Inc. or any of its other subsidiaries will be directed to Cree Venture for acknowledgement and order fulfillment.

#### **ORDER CODE & BIN CODE FORMATS**

Order codes and bin codes for J Series 5630 LEDs are configured in the following manner:

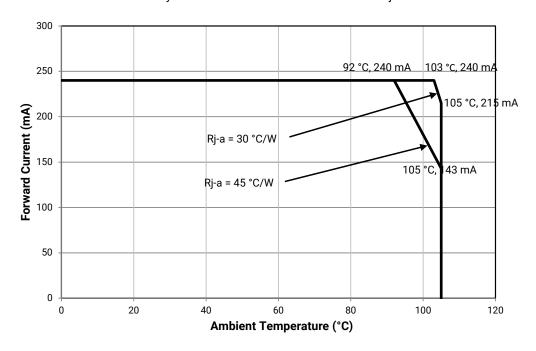

#### **CHARACTERISTICS**

| Characteristics                              | Unit    | Minimum | Typical | Maximum |
|--|---------|---------|---------|---------|
| Thermal resistance, junction to solder point | °C/W    |         | 13      |         |
| Viewing angle (FWHM)                         | degrees |         | 120     |         |
| Temperature coefficient of voltage           | mV/°C   |         | -0.9    |         |
| ESD withstand voltage (JEDEC JS-001-2012)    | V       |         | Class 2 |         |
| DC forward current                           | mA      |         |         | 240     |
| Reverse voltage                              | V       |         |         | 5       |
| Forward voltage (@ 65 mA, 25 °C)             | V       |         | 2.8     | 3.1     |
| LED junction temperature                     | °C      |         |         | 125     |
| Operating temperature                        | °C      | -40     |         | 105     |

#### **OPERATING LIMITS**

The maximum forward current is determined by the thermal resistance between the LED junction and ambient.

# FLUX CHARACTERISTICS, ORDER CODES AND BINS (I<sub>E</sub> = 65 mA, T<sub>a</sub> = 25 °C)

The following table provides order codes for J Series JB5630 LEDs. For a complete description of the order code nomenclature, please see the Order Code and Bin Code Formats section (page 3). For definitions of the chromaticity kits, please see the Performance Groups - Chromaticity section (page 11).

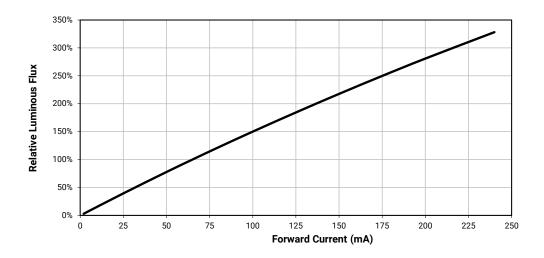

| Nominal<br>CCT | Minimum<br>CRI | Flux<br>Group | Minimum<br>Flux (lm)<br>@ 25 °C | Typical<br>Flux (lm)<br>@ 25 °C | Typical<br>Flux (lm)<br>@ 85 °C* | Order Code                    |
|----------------|----------------|---------------|---------------------------------|---------------------------------|----------------------------------|-------------------------------|
|                | 70             | D5            | 34                              | 36.6                            | 32.2                             | JB5630AWT-C0-0000-000A0BD565E |

#### Notes:

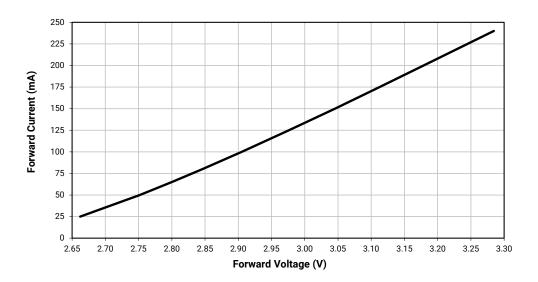

- Cree Venture maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±2 on CRI measurements. See the Measurements section (page 21).
- Cree Venture J Series 5630 LED order codes specify only a minimum flux bin and not a maximum. Cree Venture may ship reels in flux
  bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity
  restrictions specified by the order code.
- \* Flux values @ 85 °C are calculated and for reference only.

# PERFORMANCE GROUPS - LUMINOUS FLUX (T, = 25 °C)

J Series JB5630 LEDs are tested for luminous flux at 65 mA and placed into one of the following luminous-flux groups.

| Group Code | Minimum Luminous Flux (lm) | Maximum Luminous Flux (lm) |
|------------|----------------------------|----------------------------|
| C2         | 20                         | 22                         |
| C3         | 22                         | 24                         |
| C4         | 24                         | 26                         |
| C5         | 26                         | 28                         |
| D2         | 28                         | 30                         |
| D3         | 30                         | 32                         |
| D4         | 32                         | 34                         |
| D5         | 34                         | 36                         |
| E2         | 36                         | 38                         |
| E3         | 38                         | 40                         |
| E4         | 40                         | 42                         |
| E5         | 42                         | 44                         |

# PERFORMANCE GROUPS - FORWARD VOLTAGE (T<sub>2</sub> = 25 °C)

J Series 5630 LEDs are tested for forward voltage and placed into one of the following voltage bins.

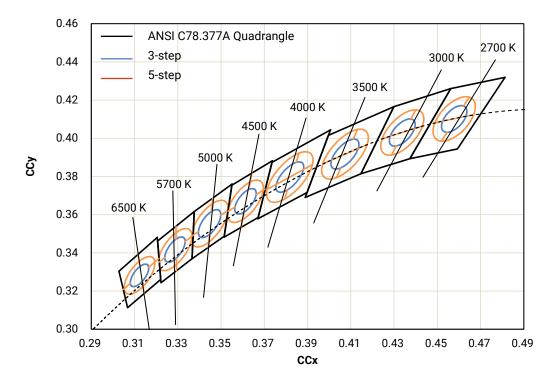

The following voltage bins are indicated in the Forward Voltage Bin field in the bin code for JB5630 LEDs.

| Voltage Bin | Minimum Forward Voltage (V) | Maximum Forward Voltage (V) |
|-------------|-----------------------------|-----------------------------|
| AC          | 2.6                         | 2.7                         |
| AD          | 2.7                         | 2.8                         |
| AE          | 2.8                         | 2.9                         |
| AF          | 2.9                         | 3.0                         |
| AG          | 3.0                         | 3.1                         |

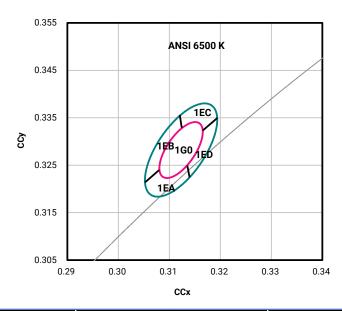

# **PERFORMANCE GROUPS - CHROMATICITY**

J Series 5630 LEDs are tested for chromaticity and placed into one of the regions defined by the following bounding coordinates.

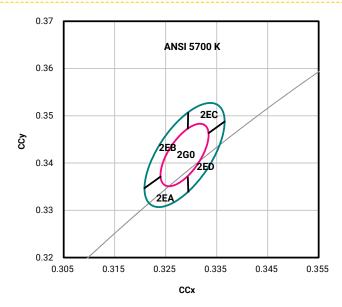

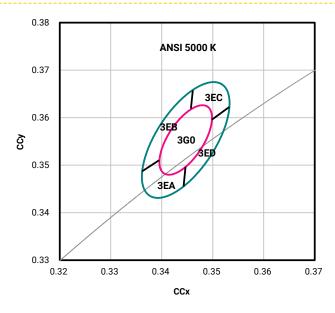

| CCT MacAdam E | MacAdom Ellinos | Included Bins                 | Center Point |        | Major Axis | Minor Axis | Rotation Angle (°) |
|---------------|-----------------|-------------------------------|--------------|--------|------------|------------|--------------------|

#### **REFLOW SOLDERING CHARACTERISTICS**

In testing, Cree Venture has found J Series 5630 LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree Venture recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer's responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

| Profile Feature  | Lead-Free Solder |  |
|--|------------------|--|
| Temperature Min. (Ts <sub>min</sub> )                                  | 150 °C           |  |
| Temperature Max. (Ts <sub>max</sub> )                                  | 200 °C           |  |
| Time (ts) from Ts <sub>min</sub> to Ts <sub>max</sub>                  | 60-120 seconds   |  |
| Ramp-Up Rate ( $T_L$ to $T_p$ )  | 3 °C/second      |  |
| Liquidus Temperature (T <sub>L</sub> )                                 | 217 °C           |  |
| Time (t <sub>L</sub> ) Maintained Above T <sub>L</sub>                 | 60-150 seconds   |  |
| Peak Package Body Temperature (Tp)                                     | 260 °C max.      |  |
| Time (tp) Within 5 °C of the Specified Classification Temperature (Tc) | 30 seconds max.  |  |
| Ramp-Down Rate $(T_p \text{ to } T_L)$                                 | 6 °C/second max. |  |
| Time 25 °C to Peak Temperature   | 8 minutes max.   |  |

Note: All temperatures refer to the topside of the package, measured on the package body surface.

#### **NOTES**

#### Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree Venture's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

#### **Pre-Release Qualification Testing**

Please read the J Series Reliability Overview for the details of the pre-release qualification testing for J Series LEDs.

#### **Lumen Maintenance**

Cree Venture uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public J Series LM-80 results document.

Please read the Thermal Management application note for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

#### **Moisture Sensitivity**

Cree Venture recommends keeping J Series 5630 LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBP that contains J Series 5630 LEDs does not need special storage for moisture sensitivity.

Once the MBP is opened, J Series 5630 LEDs should be handled and stored as MSL 3 per JEDEC J-STD-033, meaning they have limited exposure time before damage to the LED may occur during the soldering operation. The table on the right specifies the maximum exposure time in days depending on temperature and humidity conditions. LEDs with exposure time longer than the specified maximums must be baked according to the baking conditions listed below.

| Moisture             | Temp. | Maximum Percent Relative Humidity |     |     |     |     |  |
|----------------------|-------|-----------------------------------|-----|-----|-----|-----|--|
| Sensitivity<br>Level |       | 50%                               | 60% | 70% | 80% | 90% |  |
| Level 3              | 35 °C | 8                                 | 5   | 1   | 0.5 | 0.5 |  |
| Level 3              | 30 °C | 11                                | 7   | 1   | 1   | 1   |  |
| Level 3              | 25 °C | 14                                | 10  | 2   | 1   | 1   |  |
| Level 3              | 20 °C | 20                                | 13  | 2   | 1   | 1   |  |

#### **Baking Conditions**

It is not necessary to bake all J Series 5630 LEDs. Only the LEDs that meet all of the following criteria must be baked:

- LEDs that have been removed from the original MBP.
- 2. LEDs that have been exposed to a humid environment longer than listed in the Moisture Sensitivity section above.
- LEDs that have not been soldered.

LEDs should be baked at 60 °C for 24 hours. LEDs may be baked in the original reels. Remove LEDs from the MBP before baking. Do not bake parts at temperatures higher than 60 °C. This baking operation resets the exposure time as defined in the Moisture Sensitivity section above.

#### **NOTES - CONTINUED**

#### **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Ecology section of the Cree website.

# **REACh Compliance**

REACh substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACh SVHC Declaration. REACh banned substance information (REACh Article 67) is also available upon request.

# **Vision Advisory**

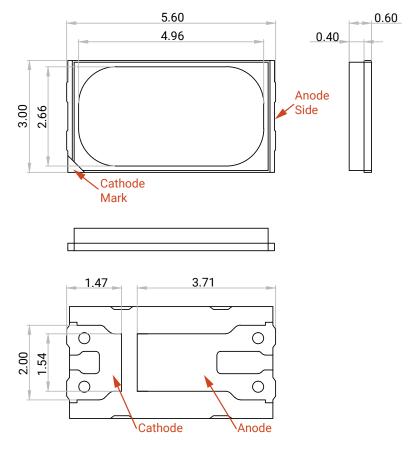

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the J Series LED Eye Safety application note.

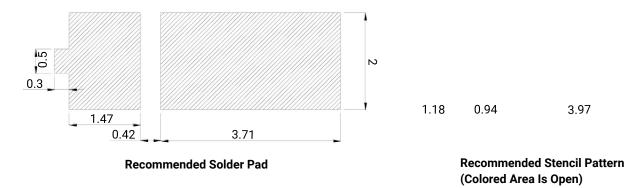

# **MECHANICAL DIMENSIONS**

Thermal vias, if present, are not shown on these drawings.

All measurements are ±0.2 mm unless otherwise indicated.

All measurements are ±0.1 mm unless otherwise indicated.

# **TAPE & REEL**

All Cree Venture carrier tapes conform to EIA-481D, Automated Component Handling Systems Standard.

All dimensions in mm.

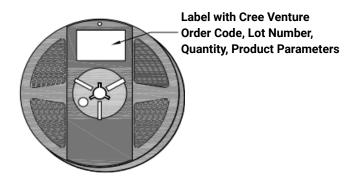

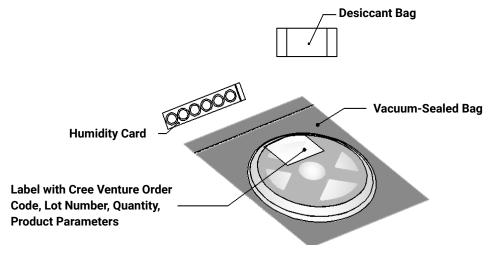

# **PACKAGING**

# **Unpackaged Reel**

# **Packaged Reel**

# **PACKAGING - CONTINUED**

J Series 5630 LEDs are packaged in boxes for shipment. Box sizes and the number of reels per box are as follows.

| Вох | Box Dimensions     | Number of Reels per Box |  |  |
|-----|--------------------|-------------------------|--|--|
| 1   | 250 x 210 x 30 mm  | 2                       |  |  |
| 2   | 250 x 210 x 50 mm  | 4                       |  |  |
| 3   | 530 x 230 x 275 mm | 44                      |  |  |
| 4   | 530 x 443 x 275 mm | 88                      |  |  |

Each box has at least one label (shown as a white square in the diagrams below) showing the order code, lot number, quantity, and product parameters.
