**Enclosure identification**

Matching connector inserts with the correct enclosures can be complicated.

To simplify we have used the definition of “size” in addition to the product’s normal identification code.

From the figure to the left and the table below, this new variable refers to the fixing distance between screw centres which, is the same for inserts and enclosures, and clear.

All the pages illustrating inserts and enclosures bear the relevant identification references.

The table below sets out all the enclosure “sizes” and the dimension of the insert fixing slots.

enclosure “size” identification	slot for inserts with fixing distance x - y
“44.27”	44 x 27 mm
“57.27”	57 x 27 mm
“77.27”	77.5 x 27 mm
“104.27”	104 x 27 mm
