

1/20, 1/100 HIGH SPEED DIVIDER**DESCRIPTION**

The M54459L is a semiconductor integrated circuit consisting of a built-in 1/20 and 1/100 high speed frequency divider featuring an ECL circuit configuration.

FEATURES

- High-speed operation ($f_{max} = 130\text{MHz}$)
- Operation at low input amplitudes (180mV_{P-P} minimum input amplitude)
- TTL level output

APPLICATION

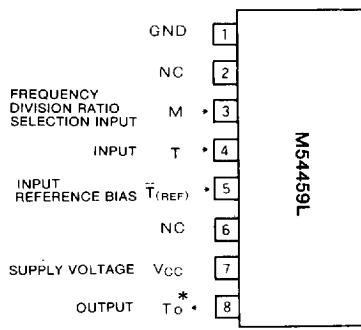

FM radio prescalers, digital equipment for consumer and industrial applications.

FUNCTION

This divider is based on an ECL circuit configuration. When a frequency up to a maximum of 130MHz is applied to the T_1 input pin, a 1/20-divided output is produced when the division ratio selection input pin (M) is low-level or a 1/100-divided output is produced when the division ratio selection input pin (M) is high-level. The output (T_0) is available in the TTL level open collector format.
