## SIZE AND INSTALLATION

| SETPOINT MODIFICATION |                           |
|-----------------------|---------------------------|
| PRESS                 | DISPLAY                   |
| 1 [SET]               | Visualizes SETPOINT 1 / 2 |
| 2 [Left] or [Right]   | Modifies selector SET     |

## TECHNICAL DATA

**Operating temperature** 0-40°C, humidity 35...95uR%

**Sealing** IP65 (with gasket) on front panel, Ip20 box and terminal blocs

**Material** PC ABS UL94V0 self-extinguishing

**Digital Inputs** 3PNP/NPN configurable as analogue for potentiometers.

**Outputs** 2 relays 5A resistive charge

**Back-UP** Rechargeable battery, approx. 60days autonomy

**Programming** Labsoftview 2.0 Software

**Power Supply** 24...230Vac/Vdc +/-15% 50/60Hz / 2W

## INTRODUCTION

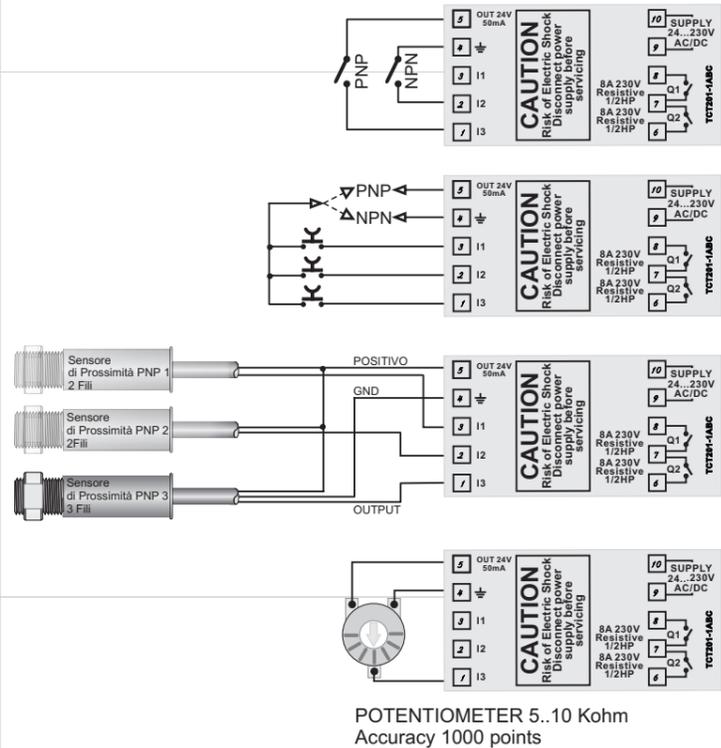

Thanks for choosing a Pixsys device.

Timer TCT201 can be set in 5 different modes; Timer-ON, Timer-OFF, Pause-Work, Oscillator, PWM (time-proportioned output), all options with independent setting of ON-OFF time. 3 universal digital inputs are availables (NPN/PNP) for external commands like Start, Stop and Reset; one input is also analogue in order to allow the modification of working times by an external potentiometer.

5 different time bases (hundredths, tenths, seconds, minutes, hours).

Counting can be incremental or decremental.

## WIRING DIAGRAM

### Potentiometer:

To modify Set1 or Set2 by external potentiometer follow the steps below:

- 1- use potentiometers 5kOhm to 10kohm
- 2- connect cursor to pin I3; a wrong connection may damage the potentiometer and lead to lock of the device.
- 3- accuracy on input is max 1000 points, therefore set the parameters "Upper limit" and "Lower limit" with a max difference of 1000 units. (Ex.: LoS1 to 50,0 and uPS1 to 150,0 to modify time value related to Set1 between 50 and 150 seconds with steps of one tenth). Greater differences would make unstable the less significant digit.
- 4- To calibrate the scale of potentiometer enter the configuration mode and select: Hin.3 as Pot

Fin.3 as Set1 or Set2  
 P.tAr as Enable

Exit configuration mode and place potentiometer at minimum level and press [SET] key, then place potentiometer at max level and press [PREMERE] key: the device automatically exit the calibration procedure.

N.B.: A switch-off of the device would interrupt the calibration.

## MEMORY CARD (optional)

Parameters and setpoint values can be copied from one device to another using the Memory card.

There are two methods:

> **With the device connected to the power supply** insert the memory card **when the controller is off.**

On activation display 1 shows and display 2 shows [----]

(Only if the values stored on Memory Card are correct).

By pressing the [SET] key display 2 shows [LoPd]

Confirm using the [SET] key .

The device loads the new data and starts again.

> **With the controller disconnected from the power supply:**

The memory card is equipped with an internal battery with a life of about 1000 uses.

Insert the memory card and press the programming button.

When writing the parameters, the LED turns red and on completing the procedure it changes to green. It is possible to repeat the procedure.

### ▲ UPDATING MEMORY CARD.

To *update* the memory card values, follow the procedure described in the first method, setting display 2 to [----] so as not to load the parameters on controller.

Enter configuration and **change at least one parameter.** Exit configuration. Changes are saved automatically.

### LOADING DEFAULT VALUES

This procedure restores the factory settings of the instrument.

### CONFIGURATION PARAMETER MODIFICATION

| PRESS                       | DISPLAY   | DO  |
|-----------------------------|---|---|
| 1 [SET] for 3 seconds       | On display 1 appears [----] with 1st digit blinking, while display 2 shows [PASS] |   |
| 2 [Left] or [Right]         | Modify blinking digit and pass to the next one pressing [SET]                     | Enter Password [1234]                                     |
| 3 [SET] to confirm          | Display shows first parameter of configuration table [Func]                       |   |
| 4 [Left] or [Right]         | Scroll parameters   |   |
| 5 [SET] + [Left] or [Right] | Increase or decrease visualized value pressing [SET] and an arrow key             | Enter the new data that will be saved when releasing keys |
| 6 [Left] + [Right]          | End configuration, controller exits from configuration                            |   |

### LOADING DEFAULT VALUES

| PRESS                 | DISPLAY   | DO                                   |
|-----------------------|---|--------------------------------------|
| 1 [SET] for 3 seconds | On display 1 appears [----] with 1st digit blinking, while display 2 shows [PASS] |                                      |
| 2 [Left] or [Right]   | Modify blinking digit and pass to the next one pressing [SET]                     | Enter Password [9999]                |
| 3 [SET] to confirm    | Device loads default values   | Switch the device off and restart it |

### LIST OF PARAMETERS

#### FUNCTION CONFIGURATION

| Func  | P-01 Timer Function | Timer functions                                 |         |
|-------|---------------------|---|---------|
| [On]  | Timer On            | Activates output at count end                   | Default |
| [Off] | Timer Off           | Deactivates output at count end                 |         |
| [PA]  | Pause/Work          | T1 and T2 start in sequency                     |         |
| [OSC] | Oscillator          | T1 and T2 start in sequency repeatedly          |         |
| [PUN] | PWM                 | Percentage output activation on fixed time base |         |

#### BACKUP MEMORY CONFIGURATION

| PaNE  | P-02 Power-off Memory | Power-off memory                            |         |
|-------|-----------------------|---|---------|
| [Dis] | Disable               | Disabled                                    | Default |
| [OnT] | Only Timer            | Only timer value in memory                  |         |
| [ALL] | Timer / State         | Timer value and START/STOP status in memory |         |

#### INPUT CONFIGURATION

| Hi.n  | P-03 Hardware Input 1 | Input 1 configuration |         |
|-------|-----------------------|-----------------------|---------|
| [aP]  | NPN                   | NPN                   |         |
| [pP]  | PNP                   | PNP                   | Default |
| [TTL] | TTL                   | TTL                   |         |

| Hi.n2 | P-04 Hardware Input 2 | Input 2 configuration |         |
|-------|-----------------------|-----------------------|---------|
| [aP]  | NPN                   | NPN                   |         |
| [pP]  | PNP                   | PNP                   | Default |
| [TTL] | TTL                   | TTL                   |         |

| Hi.n3 | P-05 Hardware Input 3 | Input 3 configuration |         |
|-------|-----------------------|-----------------------|---------|
| [pP]  | PNP                   | PNP                   | Default |
| [TTL] | TTL                   | TTL                   |         |
| [Pot] | Potent.               | Potentiometer         |         |

| Hi.n1 | P-06 Active State Input 1 | Input 1 activation   |         |
|-------|---------------------------|----------------------|---------|
| [HL]  | High Level                | High level           |         |
| [LL]  | Low Level                 | Low level            |         |
| [rS]  | Rising edge               | Transitory in rising | Default |

| Hi.n2 | P-07 Active State Input 2 | Input 2 activation   |         |
|-------|---------------------------|----------------------|---------|
| [HL]  | High Level                | High level           |         |
| [LL]  | Low Level                 | Low level            |         |
| [rS]  | Rising edge               | Transitory in rising | Default |

| Hi.n3 | P-08 Active State Input 3 | Input 3 activation   |         |
|-------|---------------------------|----------------------|---------|
| [HL]  | High Level                | High level           |         |
| [LL]  | Low Level                 | Low level            |         |
| [rS]  | Rising edge               | Transitory in rising | Default |

| Fi.n1  | P-09 Function Input 1 | Input 1 function     |         |
|--------|-----------------------|----------------------|---------|
| [Dis]  | Disable               | Disabled             |         |
| [SSt]  | Start / Stop          | Start / Stop         | Default |
| [SStR] | Start / Stop-Reset    | Start / Stop-Reset   |         |
| [SStS] | Reset-Start / Stop    | Reset-Start / Stop   |         |
| [rSSt] | Reset / Start / Stop  | Reset / Start / Stop |         |

| Fi.n2 | P-10 Function Input 2 | Input 2 function |         |
|-------|-----------------------|------------------|---------|
| [Dis] | Disable               | Disabled         |         |
| [rES] | Reset                 | Reset            | Default |

| Fi.n3  | P-11 Function Input 3 | Input 3 function                         |         |
|--------|-----------------------|--|---------|
| [Dis]  | Disable               | Disabled                                 |         |
| [UA]   | Wait                  | Wait (count lock)                        |         |
| [Hold] | Hold                  | Hold (locks display but count continues) | Default |
| [SET1] | Potent. To SET1       | Modify SET1 by potentiometer             |         |
| [SET2] | Potent. To SET2       | Modify SET2 by potentiometer             |         |

| Ft.nP  | P-12 Function Key UP | Function of [Up]                         |         |
|--------|----------------------|--|---------|
| [Dis]  | Disable              | Disabled                                 | Default |
| [SSt]  | Start / Stop         | Start / Stop                             |         |
| [SStR] | Start / Stop-Reset   | Start / Stop-Reset                       |         |
| [SStS] | Reset-Start / Stop   | Reset-Start / Stop                       |         |
| [rSSt] | Reset / Start / Stop | Reset / Start / Stop                     |         |
| [rES]  | Reset                | Reset                                    |         |
| [UA]   | Wait                 | Wait (count lock)                        |         |
| [Hold] | Hold                 | Hold (locks display but count continues) |         |

#### OUTPUT CONFIGURATION

| OUT.1  | P-13 Output Q1 Setup | Output Q1 selection |         |
|--------|----------------------|---------------------|---------|
| [Dis]  | Disable              | Disabled            |         |
| [E1n]  | Out Timer 1 n.o.     | Timer output 1 n.o. | Default |
| [E1nc] | Out Timer 1 n.c.     | Timer output 1 n.c. |         |
| [E2n]  | Out Timer 2 n.o.     | Timer output 2 n.o. |         |
| [E2nc] | Out Timer 2 n.c.     | Timer output 2 n.c. |         |
| [StAr] | Start                | Start               |         |
| [StOp] | Stop                 | Stop                |         |

| OUT.2  | P-14 Output Q2 Setup | Output Q2 selection |         |
|--------|----------------------|---------------------|---------|
| [Dis]  | Disable              | Disabled            | Default |
| [E1n]  | Out Timer 1 n.o.     | Timer output 1 n.o. |         |
| [E1nc] | Out Timer 1 n.c.     | Timer output 1 n.c. |         |
| [E2n]  | Out Timer 2 n.o.     | Timer output 2 n.o. |         |
| [E2nc] | Out Timer 2 n.c.     | Timer output 2 n.c. |         |
| [StAr] | Start                | Start               |         |
| [StOp] | Stop                 | Stop                |         |

#### DISPLAY CONFIGURATION

| TYPE   | P-15 Type of Timer | Count mode  |         |
|--------|--------------------|-------------|---------|
| [Incr] | Incremental        | Incremental | Default |
| [Decr] | Decremental        | Decremental |         |

#### SETPOINT CONFIGURATION

| Fo.S.1 | P-16 Format Set 1 | Count format     |         |
|--------|-------------------|------------------|---------|
| [SSc]  | Second.Cent       | Seconds, Cents   |         |
| [SSd]  | Second.Decimal    | Seconds, Tenths  | Default |
| [SSS]  | Second            | Seconds          |         |
| [MSS]  | Minute,Second     | Minutes, Seconds |         |
| [HM]   | Hour,Minute       | Hour, Minutes    |         |
| [HH]   | Hour              | Hour             |         |

# TCT201-1ABC "TIMER"

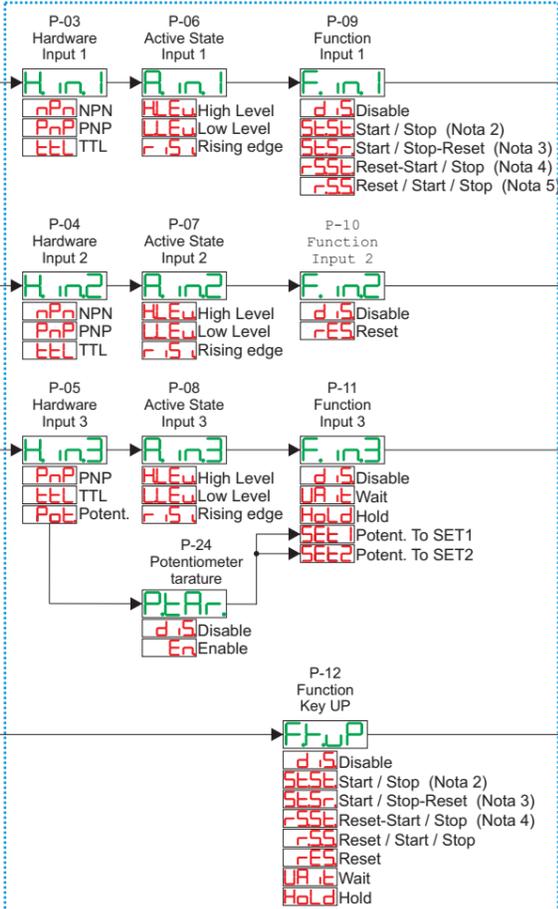

## FUNCTION CONFIGURATION

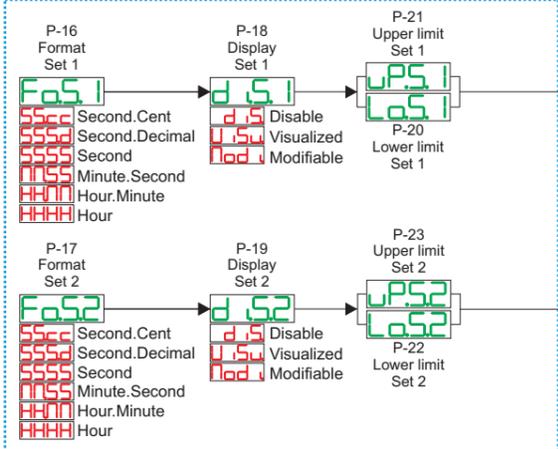

## BACKUP MEMORY CONFIGURATION

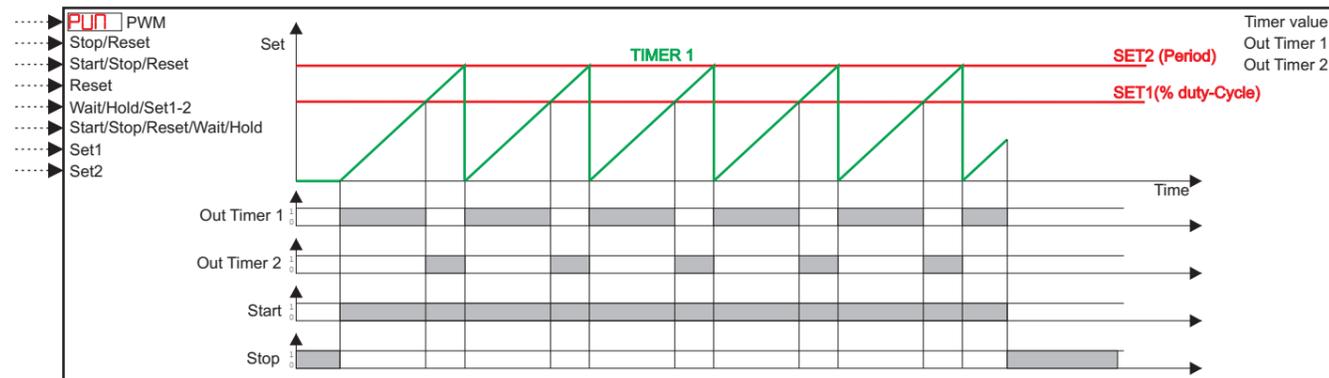

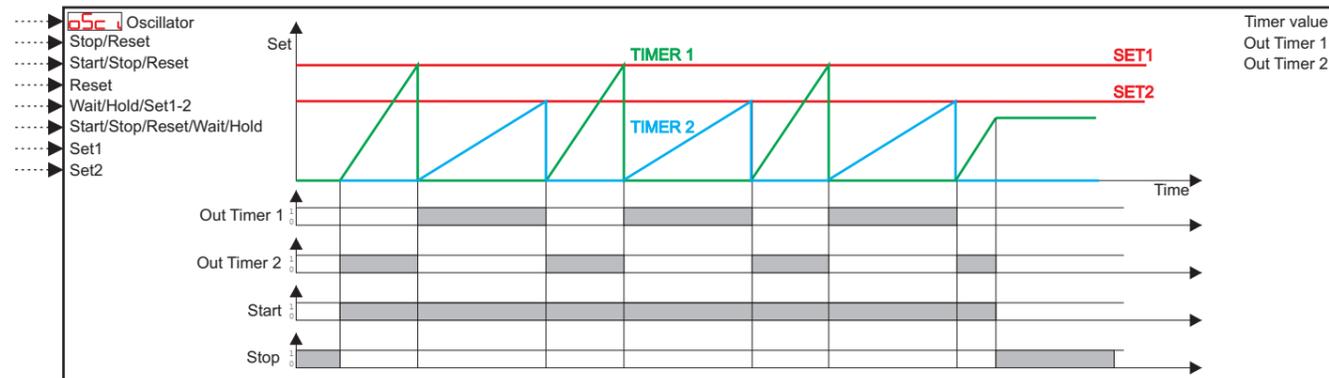

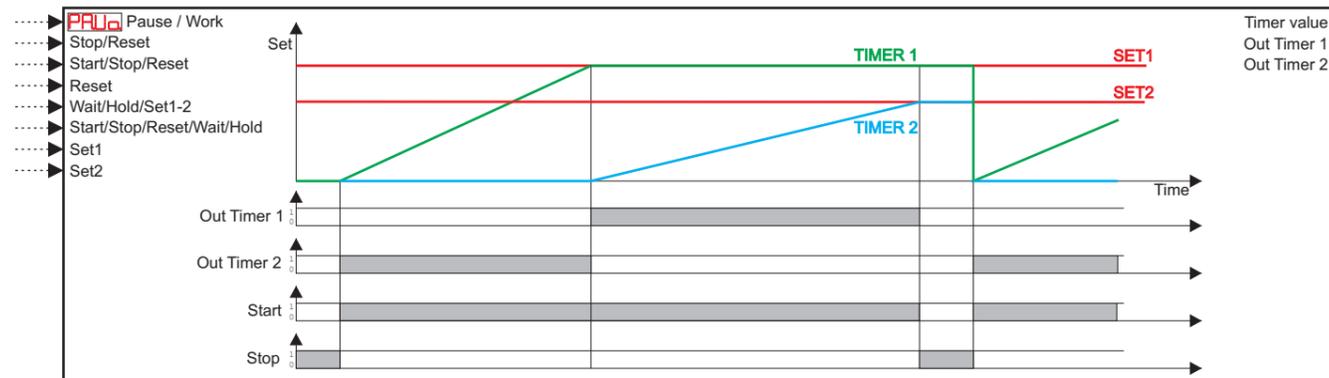

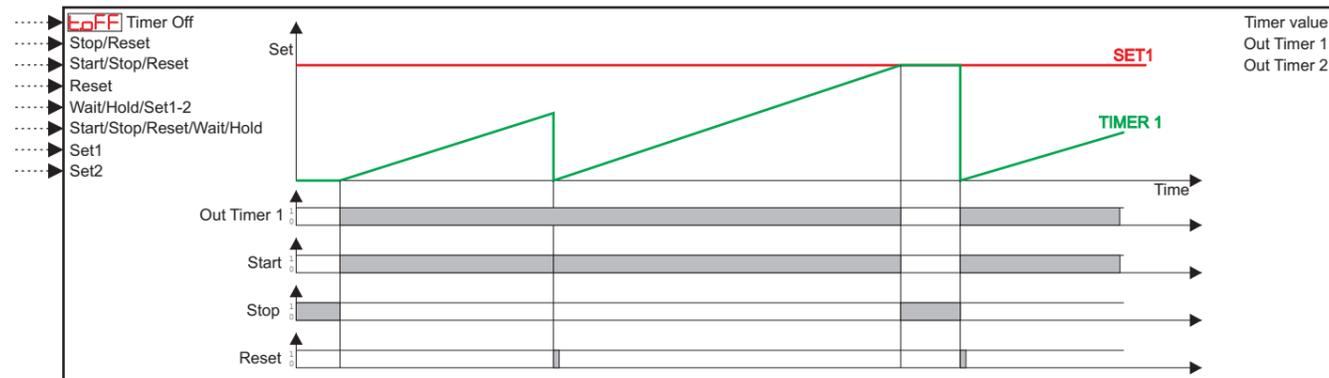

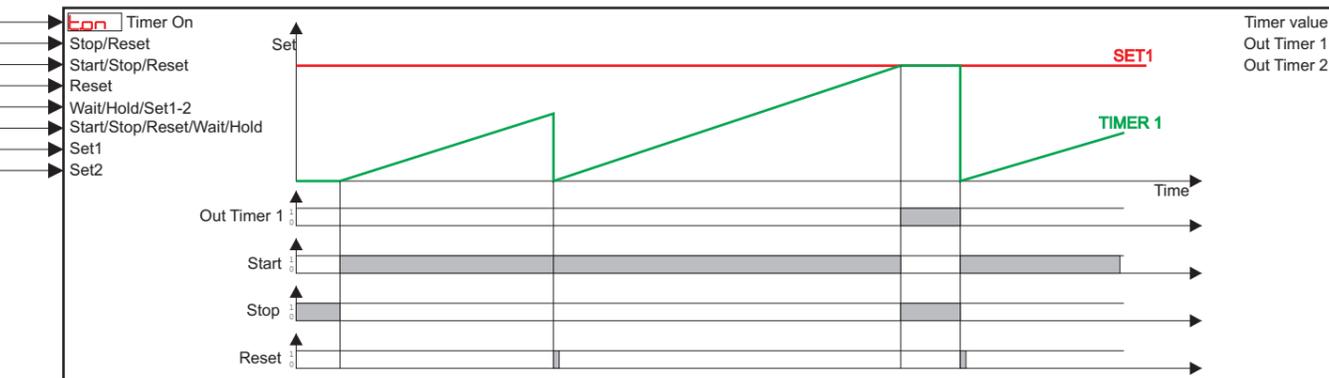

## INPUT CONFIGURATION

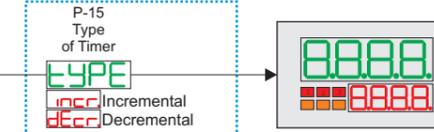

## SETPOINT CONFIGURATION

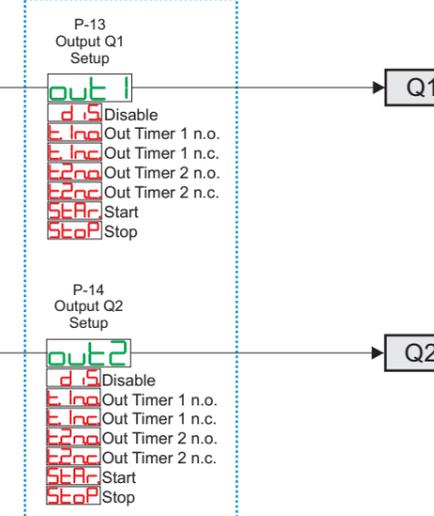

Nota 1: In this timer functioning, if P-06 Active State Input 1 = Rising Edge or P-09 Function Input 1 = Disable, at count end (reaching setpoint), timer will switch automatically to STOP.  
 Nota 2: This function not reset timer value, and so it requires an input for the reset.  
 Nota 3: This function reset timer at STOP.  
 Nota 4: This function reset timer at START.  
 Nota 5: This function è attiva solo se P-06 Active State Input 1 = Rising Edge

## DISPLAY CONFIGURATION

## OUTPUT CONFIGURATION

| Logic Level | Input Type | NPN Input | PNP Input                         | TTL Input |
|-------------|------------|-----------|-----------------------------------|-----------|
| H           |            | < 9,0 v   | >10,5 v (I1, I2)<br>>12,3 v (I3)  | >2,9 v    |
| L           |            | > 10,5 v  | < 9,0 v (I1, I2)<br>< 11,0 v (I3) | < 2,4 v   |

## TABLE of ERROR MESSAGES

- E-01 ERROR in WRITING of EEPROM Memory
- E-02 ERROR in READING of EEPROM Memory
- E-03 Incorrect parameters (Nota 1)
- E-04 Incorrect calibration data (Nota 1)
- E-05 Incorrect status data (Nota 1)
- E-06 Incorrect BACKUP registers! (Nota 2)

Nota 1: Switch the device off and restart it; if error is still notified, contact technical service  
 Nota 2: Discharged battery: keep the device connected to power supply in order to recharge the battery.

⚠ In PWM mode, the only option available on parameters 16 **F6S1** and 17 **F6S2** for format of SET1 and SET2 is **5555** (seconds). Low and upper limits for SET1 (related to percentage of work or Duty Cycle) are allowed in the range 0 ... 100 (%). da 0 a 100 (%).
